Project Reference: Marshall Substation improvements

Information about a Duke Energy reliability project in your community.

Dear Neighbor,

Duke Energy is committed to keeping you informed as we make grid improvements in your area. We are planning upgrades to Marshall Substation along Elblaine Drive off U.S. 27 in Highland Heights, Ky., which will help to improve the reliability of your electric service. This work will also involve repairs to the substation fence and gates.

Neighbors will see early planning at the substation in late April or early May 2025. However, the most noticeable construction will occur around August 2025.

Duke Energy is also planning to replace some wood utility poles with steel pole construction on a 69-kilovolt (kV) transmission line that serves the substation. This work is necessary following recent inspections on the utility poles near the substation. The new poles could be between 5 to 10 feet taller than the present construction and will involve vegetation maintenance to safely access the transmission pole replacement project, including the removal of two mature trees just outside the substation. Vegetation maintenance for this portion of the project is planned for July 2025, followed by construction on the pole replacements in September. We expect all construction in and around Marshall Substation to be completed by late fall 2025.

Installing transmission equipment resembles a typical construction site, with numerous crews, trucks and equipment. Neighbors can expect skilled contractors and trade workers in the project area during daytime hours. These upgrades will help to improve reliability, speed your community's restoration during power outages and strengthen the electric system. Road restrictions may be necessary for the transmission line work. Flaggers will assist with directing traffic around that construction.

If you would like to discuss this project, please contact our automated voicemail system at 888.827.5116, or email questions and comments to MWOHioTransmission@duke-energy.com. Please provide your name, project reference, property address, and a phone number where we may reach you. We appreciate your understanding as we work to meet your current and future energy needs.

Sincerely,

Jack Berry
Project Manager
